

2022 TENNESSEE

STATE AGING
PROFILE

Dear Reader,

The U.S. Census Bureau reports in 2034 older adults are expected to outnumber children under 18 for the first time in the history of the United States. Currently, 1.6 million Tennesseans are age 60 and older. As the fastest growing demographic in Tennessee, older adults will soon constitute one-fifth of the total population. In light of this, the Tennessee Commission on Aging and Disability (TCAD) is pleased to present the 2022 State Aging Profile. As the designated state unit on aging under the U.S. Older Americans Act, TCAD works every day to ensure the quality of life and independence of older Tennesseans and adults with disabilities. In order to make informed policy decisions for the populations we serve, TCAD uses data-driven conclusions to improve programs and performance.

In this report, you will find user-friendly snapshots of county, congressional district, and state-level data specific to older adults. The profiles, based on data from a variety of sources, cover all of Tennessee's 95 counties, as well as our 9 congressional districts based on lines drawn from the 2020 U.S. Census. Each profile includes the projected population over the next 10 years, and presents a snapshot of specific data points relative to the leading issues older adults are facing. In addition to print copies, this report will be accessible on TCAD's website (tn.gov/aging) and we encourage you to share this with relevant stakeholders, advocates, and policymakers across the state.

Since my appointment to lead TCAD in July 2021, we have achieved much to celebrate for our state's aging population. We have much more to do. I look forward to our state, local, and federal leaders utilizing this data as we prepare for the future.

Sincerely,

A handwritten signature in black ink, appearing to read "James Dunn". The signature is fluid and cursive, with a large initial "J" and "D".

James Dunn
Executive Director

GLOSSARY

C

Chronic Conditions

Chronic conditions are human health conditions, or illnesses, which last for 3 months or longer, including physical and mental conditions. Chronic conditions tend to be most prevalent among older adults. Those with multiple chronic conditions have higher medical costs and live 5.3 fewer years [3]. Lifestyle factors, including tobacco use, insufficient physical activity, poor diet, and excessive alcohol consumption, contribute significantly to chronic conditions. Chronic conditions, for this measure, include Alzheimer's Disease and dementia-related illnesses, heart failure, arthritis, hepatitis, asthma, HIV/AIDS, atrial fibrillation, high cholesterol, autism spectrum disorder, high blood pressure, cancer, ischemic heart disease, chronic kidney disease, osteoporosis, chronic obstructive pulmonary disease, schizophrenia and other severe mental disorders, depression, stroke, and diabetes.

Data for this measure are based on enrollment and claims data for Medicare fee-for-service beneficiaries from 2017 [3].

Cost-Burdened Homeowners

Housing is the single largest expense for older adults. Homeowners who spend more than 30% of their income on housing and may have difficulty affording essentials, such as food, clothing, transportation, and medical care, are considered "cost-burdened homeowners." Every additional dollar spent on housing costs and utilities takes away money from people's food, medical costs, and transportation.

This measure is an indicator for over 80% of older Tennesseans who are homeowners with or without a mortgage, which does not include renters. Renters in this same age group, however, tend to experience worse than homeowners. Ultimately, older Tennesseans who are classified as cost-burdened pose a particular problem because these individuals are more likely to struggle to make ends meet.

Data for this measure comes from the 2016-2020 data for the American Community Survey 5-year estimates [12].

D

Demographic Data

Demographic data, contained within this document, is used for informational purposes to provide a broad overview of important characteristics which represent our population of older Tennesseans.

Data sources include the Boyd Center for Business & Economic Research [2], the Centers for Medicaid and Medicare Services [3], and the United States Census Bureau [7, 8, 9, 10, 11, 12, 13, 14]

Disabilities

Disabilities are physical or mental conditions which limit the ability to perform daily activities and restrict interaction with the environment around them. Older Tennesseans have the highest prevalence of disability due to an accumulation of health risks and conditions. Disability for this measure includes cognitive disability, self-care difficulty, independent living difficulty, difficulty walking, hearing impairment, and vision impairment.

Data sources include the number of disabilities by age and comes from 2016-2020 data for the American Community Survey 5-year estimates [12].

G

Grandparents Raising Grandchildren

When parents are absent or unable to raise their children, grandparents often step in to help their grandchildren. Some grandparents express that the experience enhances their lives. At the same time, grandparents raising their grandchildren can experience increased levels of stress in their lives from supporting their grandchildren, saving for retirement, and maintaining their own health. Given these factors, grandparents who are responsible for raising their grandchildren tend to be vulnerable to physical and mental conditions, which emphasize the importance

to provide support, empowerment, and services to them when needed.

Data presented includes the number of grandparents responsible for raising their grandchildren and comes from the 2016-2020 data for the American Community Survey 5-year estimates [8,9].

M

Medicare Enrollees

Medicare is the federal health care insurance program for individuals who are 65 years of age and older. Many older Tennesseans are Medicare enrollees. Medicare helps with the cost of healthcare, but the program does not cover all medical expenses or the cost of most long-term care.

Data presented includes the number of Medicare Enrollees and comes from the 2016-2020 data for the American Community Survey 5-year estimates [14].

P

Poverty

Many seniors live on limited incomes and modest savings. Many individuals, especially those below the 100% of the federal poverty limit, may struggle with the costs of housing, healthcare, healthy food, and reliable transportation. Poverty rates among older adults tend to increase with age.

Data presented includes the poverty status in the past 12 months and comes from the 2016-2020 data for the American Community Survey 5-year estimates [13].

Population

The population data consists of the most recent data collection on Tennessee's older population of individual ages 60 and over. In addition, the data consists of projected population statistics in the years of 2030 and 2032. As the aging population is increasing in number, the older adult population is growing than ever before in history.

Data presented includes the population data which comes from the 2016-2020 data for the American Community Survey 5-year estimates [6], and the Boyd Center for Business and Economic Research [2].

V

Vehicles

Transportation is a prominent issue among older adults in Tennessee. Older adults may drive less frequently or not at all, which can be due to the lack of a personal

vehicle. Without a regular means of transportation, older adults tend to experience limitations in accessing essential locations, including grocery stores, hospitals, banks, and more.

Data presented includes households without a vehicle and comes from the 2016-2020 data for the American Community Survey 5-year estimates [10].

Veterans

The veteran population in Tennessee is aging. Veterans who served during earlier wars, such as World War II, from 1939 to 1945, and the Korean War, from 1950 to 1953, have already entered the older population. One of the largest groups of veterans, who served during the Vietnam War between 1954 to 1975, are rapidly entering the older adult population. Also, in the most recent wars, such as the Gulf War (1990 to 1991), Afghanistan War (2001 to 2021), and the Iraq War (2003 to 2011), veterans are reaching the aging population. Therefore, this report acknowledges the veteran status of older Tennesseans, which should raise awareness on how to support veterans, who experience multiple health conditions, such as post-traumatic stress disorder (PTSD), depression, and anxiety.

Data presented includes veteran status and comes from the 2016-2020 data for the American Community Survey 5-year estimates [11].
